Exoneration Projects - (summary, PDF, news - en route)
Advance into the direction of the future, the extra-ordinary vision
☆ Pro-Active, Emergency, Intervention, multi-dimensional solutions;
☆ National, Industrial, Economic and Enterprise Security;
☆ Counter-measures for national, geo-political and exo-political scenarios;
☆ options and combinations with Advanced Projects and Exponential Projects ;
☆ options with Special Projects and Advanced Civilisation Projects;
☆ options for political, governmental and economic re-orginisation;
☆ Regroup and re-deploy enterprise and co-enterprise;
☆ Development and promotion of private enterprise;
☆ Investment, acquisition and co-development

Economic Leadership eh! Great fantastic! Maybe ask for a moment, ‘Who on earth are you waiting for?” A visionary, a leader, an inventor, an entrepreneurial free enterprise genius, an industrialist, a down to earth character with real Canadian values, a technological prodigy? A nationalist visionnaire extraordinaire? Who you are looking for is Michael Comeau, the founder and CEO of the most awesome advanced technological manufacturing development program and projects of the century. You just don’t know it yet.

Are you looking for someone capable of stealth business, national security rated, someone with a secret identity that you would never guess or suspect his true identity and profession?

Are you looking for someone working on the most awesome Made in Canada portfolio in the history of Canada.

Made in Canada? Can you name anyone in government, an MP or MPP who actually talks or writes about Made in Canada? Eh? What about your friends and the people you know? Is there really someone known as the coffeeshop billionaire? They mystery man who claims he drinks coffee to do stupid things faster? Like how fast? How about CF-105Arrow.ca? Is that a little more up to speed?

Is Comeau Aerospace Inc. more up to speed, pure awesomeness, the ultimate flying machine, with a magnitude of design engineering genius and individual creative imagination, the genie out of Aladdin’s lamp. Zero unions, working share owners, asset protection, everyday advantage and more of what you never get in the news, as it makes everything else obsolete and backwards by comparison.

Do you want to talk about space programs, strategic airlifters, conventional and advanced design and technology? A few hundred billion in aerospace development programs, talk about go big or go home, what about that saying that the 21st century belongs to Canada? Imagine, zero government money, zero publicity, only people doing stuff because they want to, in fact, the less publicity the better, now how is that for a business model? Eh Who cares about all the negative defeatist anti Canadian editorial opinions, design, build, fly.

Stealth, UFOs, advanced weapons systems? Advanced materials and manufacturing? Is that more interesting? As-Garde Aerospace and Electrodynamics Inc. integrates creative imagination and inventive genius with a futuristic vision in their own portfolio of projects and also works to further refine and develop the next generation of the Comeau Aerospace Inc. – Ultimate Flying Machine series in addition to the core research and development vision. The transition from conventional aircraft design, production and propulsion is kind of like comparing the Avro Arrow Interceptor to a propeller driven aircraft, something from a futuristic outer space civilization or the CBC movie – Arrow.

What about the nationalist? Economic leadership includes a technological, enterprise and industrial continuum, with a nationalist foundation and national security rated people, with real Canadians with true values. Imagine an individual with a private life working incessantly on the greatest adventure of all time. Classified defence technology, advanced aerospace, marine and transportation technology, something with challenge and reward, the thrill of building something awesome, the proverbial censored white nationalist super achiever that

mainstream news never talks about in a good way, and doesn’t want any other white nationalist to know about, because if you did, you would feel different, alive, confident, optimistic, purposeful, awesome, energized and excited.

What about National Turbo-machinery & Propulsion Incorporated, redeveloping engines for the ultimate Arrow, the CF-105, jet engines, rocket engines and the most advanced fuel systems in the world, which can’t be sold to just anyone, more of what you never hear or read about in mainstream media and government. Super Atomized Fuel Systems Inc., VapourInduction Fuel Systems Inc., Super Carburetor Inc. and Icosahedron Hydrogen GeneratorFuel Systems Inc.

With all the focus on “green technology” and “green investment” and the war on fossil fuels, and banks and investment portfolios “divesting” aka dumping those securities, because that is evil white man technology and the cause of global warming, you might think that they would be well invested, like an insider would be, invested into something useful, practical and real, something that could transform the world, with technological and economic leadership, right?

Saving money is like making money, that is economic leadership, right? Sometimes, massive investment in money, resources, time, infrastructure and people are all essential to make that possible, that takes confidence, technological and economic leadership, which can involve capital structure, enterprise and secure supply line development. This brings everything around in a circle of reality, as it is amazing, that with government legislation can make 4 different fuel system companies be worth billions of dollars, poof! With zero publicity! Of course those companies don’t believe in the carbon tax, or shutting down the fossil fuel industry in Canada, they like to burn fuel. Wouldn’t you at mach 3 or 200 miles per gallon?

What’s it going to be, a gas guzzler, or something a lot more awesome? How is that for leadership, eh? Many hands make light work – how is that for personal economic leadership? Mainstream news, aka liberal fascist news, with the cultural marxist anti nation state agenda will never have anything good to say about things like the Avro Arrow, or free enterprise about that don’t conform to their editorial opinion…all the more to ignore them, censor them, make them obsolete and irrelevant, like they are, useless.

Economic Leadership? How about Strategic Enterprise Development Inc. or IntergalacticSecurities & Management Corporation, the leading edge in private investment, private enterprise, defence technology, Made in Canada. If you want an education maybe check that out, you will make your investment advisor look and feel not very smart, with all

their exports of money and stock market gambling on things that don’t matter, that are on par with the Canada Pension Plan, yes, lots of money for foreign companies and governments to put us out of business faster, since you refuse to exercise powerful freedom of choice and invest in private Canadian companies that actually do practice intelligent thoughtful patriotism, that only whitey qualifies for, a nationalist, Made in Canada? Is that so bad, is that racist to you, Made in Canada?

Go to the store, 95% made in china, is that racist and discriminatory? Now is that any way to exercise economic nationalism? Do you have a problem with self sufficiency or self government, or God helps those who help themselves? What about God eh? Don’t talk about religion? How about “I will command a blessing on you and all that you set your hands to do…” sounds economic to me, Is that the health and wealth gospel, here and now, we cannot deny our shared history, we can embrace our mutual future, right? Can we build great things together to the honour and glory of the great God? We can do it because we want to, we don’t need anyone’s approval, especially in mainstream media.

Create a more Canadian media industry, that would be economic leadership, our companies, inventions, products, jobs and careers, new enterprise opportunities, that would be economic leadership to promote, not censor, to empower, not suppress, to encourage, not to neutralize and defeat and ruin, to be proud, not bitter, resentful, hostile and negative like the mainstream news media, something more Canadian, real Canadian, eh! Optimism, awesome news eh!

We like our shared history, our national identity as real Canadians, the future too, step back in time, people had faith, people built things, inventions, buildings, infrastructure, technology, families, we of all countries in the world can be supremely self sufficient. We do not need imbeciles, traitors, saboteurs in Ottawa or anywhere else for that matter. We need people that can do the math, geometry, engineering, metallurgy, fabrication, production, logistics, pure creative imagination without limits. Real Canadians and nationalists capable of economic leadership, empowering technological and manufacturing leadership in government, not foreigners, or traitors and people that can’t do math, basic economics, money management and basic nation building, like Made in Canada, it does not even have to be advanced, but it does need to be Made in Canada Eh!

Go forward eh! What kind of economic leadership are we looking for? What does it look like? It looks like debt free money, not treasury bond debt creation and endless electronic debt created money. We need real M1 money, sticking to the point about economic leadership, when nobody else in the world is doing it, only to obsolete, debt, slave system, a defrauded

future, failure from looking at history, such as, what did Graham Towers do? The government and the Bank of Canada with the cultural Marxist agenda is incompetent by comparison, endless debt, compound interest, exporting billions of dollars, massive tax, industrial economic and industrial genocide super imposed on the founding people, war. Sell of gold reserves, we don’t need that eh, destroy the industrial technological base, we don’t need jobs and careers, do we? Destroy the military and better yet buy someone else’s garbage, that is what we are dealing with, imbeciles and traitors with zero economic leadership for nation building, planes, trains, automobiles, heavy machinery, marine and defence technology, virtually all gone. Four hundred billion for welfare based on a bogus virus, but nothing for Made in Canada. All the more reason to align with Strategic Enterprise Development Inc.

Protectionism? Is that racist? As if that is the only standard and reflex tool to censor whitey. Made in Canada versus who? Our we supposed to honestly compete when someone else is making something 5 cents to the dollar?? How is that competitive, when we have all the regulations and they don’t have any? Currency warfare, is that really ok? How do we exercise economic leadership in currency warfare scenarios, since that is going on right now? Easy debt free money, low taxes, greater investment, conditional sales contracts, invest and acquire, research and development, identify and get rid of people selling out the country to foreigners. Don’t worry only white people are racist, and you will like it, Made in Canada. Why is it ok for foreign companies, governments and sovereign funds to buy us up and out? Logging, mining, agriculture, natural resources. The only political party defending Canada is the National Citizens Alliance, anti globalist, pro Canadian, everyone else is selling out the country and their souls, if they have one.

Economic Leadership in defence, is that possible? Ask Battlegroup 301 Incorporated, they pioneered advanced program and project development with private investment to enable technology demonstration and super prototypes of advanced vehicles and weapons platform and secure supply line, and all kinds of other things, all to be available in case we might actually have a real nationalist vision, a more patriot character, not a bunch of traitors. As some people know, there are plenty of people in government and media that stop any degree of Canadian national pride, a competent military, like most allies, stepped on, suppressed and neutralized, all those awesome products and technology that never see the light of day, censoring and disqualifying pure awesomeness is standard operating procedure, which is a what they do to neutralize economic leadership and technological industrial and defence leadership also, which could have a rather exciting, inspiring, encouraging effect on everyday Canadians. Like wow, we built that!

Most people don’t know, but to get in on government contracts, due to the control freaks who don’t want competition from smarter, faster, cheaper, more advanced, more Canadian Nationalist type of people, enterprise and products, only certain companies are entitled to bid. Like the naval ship program, no honest request for proposals are made, and the complex requirements to even get to the point of making a request for a certain vehicle or weapon system or otherwise is a big deal. Corruption and collusion, fixed and rigged, approved and disqualified or exempt, that is no way to have defence technology and economic leadership, at the expense of national security. So knowing how reality bites and the treason of traitors selling out to globalists and other people who do not want anyone to have nation state sovereignty or an independent integrated defence advanced technology and manufacturing base, and knowing that lead times are essential in addition to a product, vehicle and weapons platform and technology continuum require considerable resources and project management, it is pure genius from Battlegroup 301 Incorporated, who has accepted personal responsibility for, in their words, “National, industrial, economic, enterprise and civil defence.” How is that for economic leadership? What does the banks, investment advisors and wealth management say about that? Nothing, they are ignorant or censoring it, they don’t appear to care about small town, rural industry, Made in Canada or strategic advantage, only, inclusion and diversity, which somehow does not include Made in Canada, private enterprise, and certainly not white nationalists who take pride in their country and love Canada.

The typical investment advisor or wealth manager is totally unaware or censoring one of the most incredible and innovative enterprise technology development endeavours in Canada, Battlegroup 301 Incorporated, all about Made in Canada. Censored and ignored, yes, but what about you, what will you do? Apply for a job, start a new career, do something awesome, I hope so. A guns & ammo co-op? While you are at it, check out the Railway industry development program, new locomotives, rail car (with no business with foreign countries we don’t need to mention that only counterfeit technology, product inferior goods and sabotage Canadian companies) Imagine, when we had a whole lot more of railroads going throughout Canada, there was vitality, a robust energy, a sense of identity, unity and purpose filled excitement. Why did we let people in government destroy it? Trains & the railway, isn’t that what made Canada? The auto industry association, what did they have to do with it? Collusion with government to tear up railway tracks. Now we are forced to drive plastic and electronic junk with rotten metal and fix it with more rotten junk imported from somewhere else, with next to nothing made in Canada, eh! Yes, let us compare economic leadership, shall we, nation building or industrial economic genocide, you can choose with powerful freedom of choice, right? What stops you, what are you waiting for? Eh?!

The Avro Arrow, torched, railways torn up, is that anyway to build a future, nation wreckers in charge, people that never built anything, most never ran a business, yet they make decisions with little or no math and financial competence, no real genius in economics except selling out the country. As we found out someone with a degree in economics did great things like selling out the country and trade deals that ruined us, talk about the wasteland in the search for the holy grail, the industrial landscape is a wasteland. Like unions who own nothing, invest in nothing, contract nothing, yet want all the power, to extort and practice terrorism, which is the use of force or the threat of the use of force, to shut down company after company, strike to smash the enterprise, jobs and production, right out of the country. Now is that any way to have enterprise productivity ad prosperity that would generate economic leadership?

So Yeah, amazing, talking about the Avro Arrow and Economic Leadership, amazing how we can tie all that together flying 3 times or more faster than the speed of sound. Since we have common interests and beliefs and values, let us work to build great things together, knowing our history, that what was done before can be done again, and if we learn from the past, we can do certain things to enable, augment and amplify the success of the future. Let us recruit smart people with perception, perspective, awareness, understanding, wisdom, ideas and imagination. Let us express the best of who we are, not making excuses, but make effort, pro active pro Canadian. A spirit of co-operation is essential, building a team, where everything has something valuable to contribute, where nobody gets jealous, but everyone jumps in with both feet, hit the ground running, on fire, living everyday with purpose…and think about it, if this was a secret military operation, how will you respond, what kind of mission tasking will you have, your personal initiative, response ability, personal empowerment by exercising powerful freedom of choice, what will you do? What are you waiting for, Eh? Everything to be perfect? Do not let the infinite perfect be the enemy of the good, as it is written. The individual can contribute to make it perfect, at least infinitely better than to succeed at doing nothing.

You might wonder, how is it possible someone with individual creative imagination can start companies with a vision of such magnitude, that goes way beyond anything in government right now is doing, and in our history as a country, has ever done?

If you look at the idea of self government, this is actually law, one’s own code, the acceptance of personal responsibility, the power to exercise freedom of choice, which is for the most part censored, along with whitey, now, a new law, the one that creates the future, the law of one individual that decides to do something about it, make effort not excuses, to be part of the solution, build something awesome, or build anything at all. In our law, we agree to treat others in a civilized manner…this is not the case in Canada right now. There is a real

difference, between the patriots and nationalists and old fashioned Canadians and those who are not. There is a difference in thinking, capabilities, aptitudes and interests, as well as intelligence, reasoning power and loyalty. I see it everyday. What is important, is that people do something, not waiting for everything to be perfect. Align your values and priorities with what you do, your actions. Do something, go forward, make decisions, keep making decisions with a pro-active life of adventure and achievement, even super-achievement, hold nothing back, express the best of who you are, encourage others, make friends and allies, build great things together, redevelop and rebuild the national dream. Someone has already made it a lot easier to do that, so what are you waiting for? Who are you waiting for? Wait no more, you have the answer you are looking for, you have the solution and power, all you need to do is exercise it.

It is time for all good men to come to the aid of their country, right? Wait no more!

Peace, Order and Good Government, right?

Cheers, have an awesome and pro-active day in Canada!
